

The Literature Review Seminar

Seminar: Master | Ph.D.

Prof. Dr. Gerit Wagner

Information Systems and Applied Computer Sciences

Otto-Friedrich-Universität Bamberg

Prior knowledge of literature reviews, topics, and expectations

- What is your topic and research question for this seminar?
- What are your expectations for the seminar?
- Did you work on a literature review before?

Your instructor: Prof. Dr. Gerit Wagner

Sustained **fascination** for literature reviews for 10+ years:

- 2014-2018: **Dissertation** on the scientific impact of literature reviews
- 2020-2022: Postdoctoral fellowship at HEC Montréal (Canada):
 - Worked with **Guy Paré**, Ph.D., a frequent co-author and mentor, who served as a Senior Editor for Literature Reviews at JAIS
 - Served as a TA for the **literature review seminar** for Ph.D. students at five universities in Montréal
- 2022-2024: Professor of Information Systems at Otto-Friedrich-Universität Bamberg
 - Started offering the **Literature Review Seminar**
- I have **published 20 papers related to literature reviews** (out of 30)
- I am the lead developer of **CoLRev**, a Python tool for literature reviews

Why literature reviews are exciting (I)

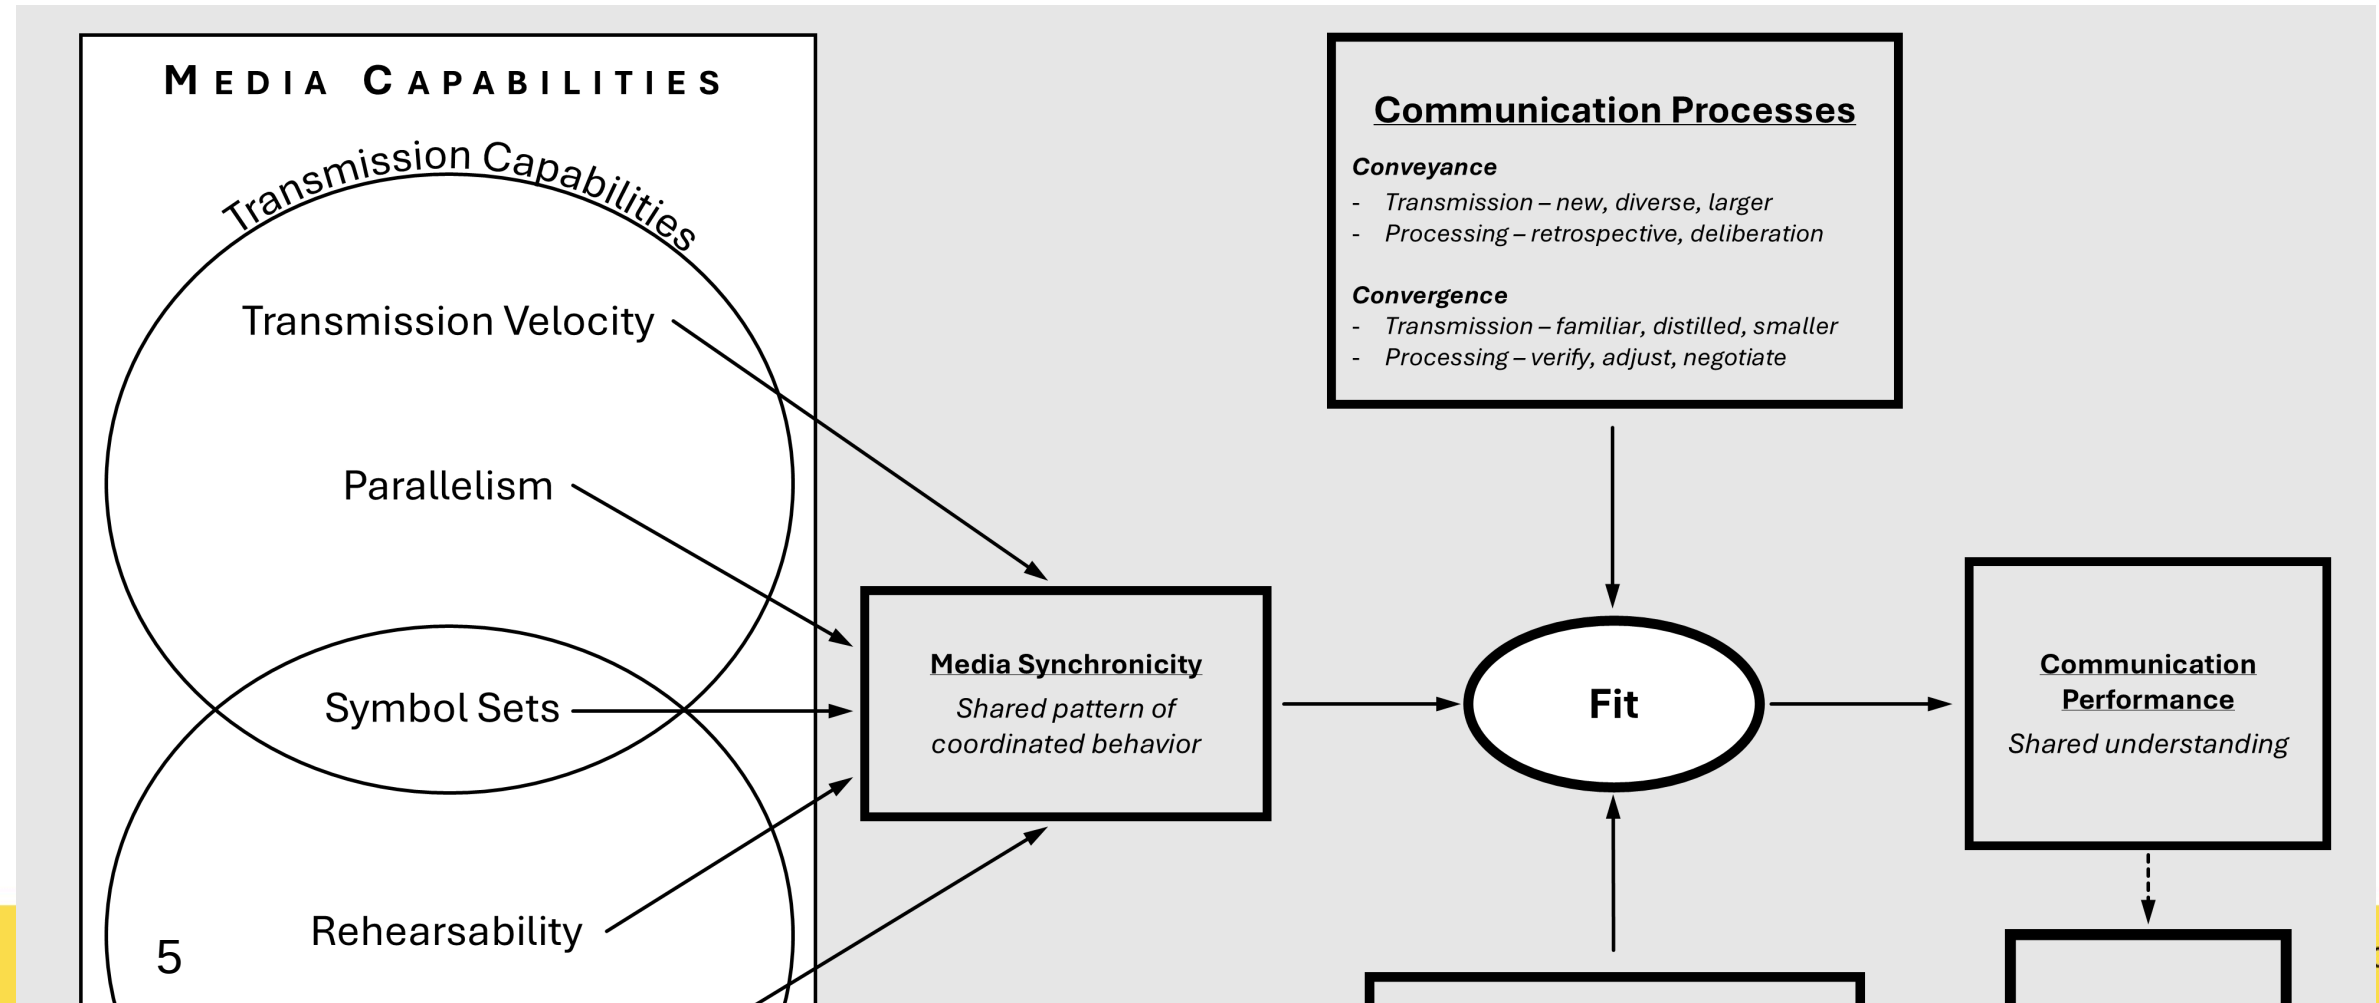

Literature reviews are essential to respond to key trends:

- The rapid growing volume and variety of research output:
 - Over 2 million new papers per year
 - Over 600 guidelines for different research methods (see EQUATOR network)
- The need to demonstrate novelty of contributions and avoid reinventing the wheel
- The need to exercise critical judgment of prior research

In the future, the ability to synthesize, organize, and critically assess prior research will become even more essential.

Why literature reviews are exciting (II)

Literature reviews can make theoretical contributions that could never be accomplished in an individual study.

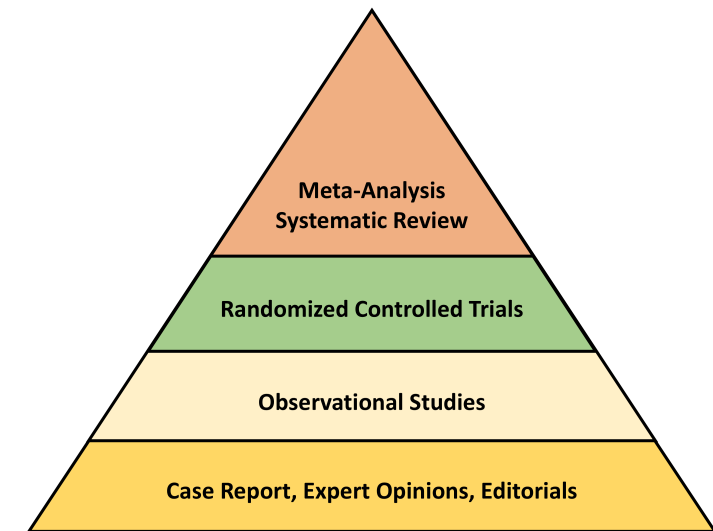

Why literature reviews are exciting (III)

Meta-analyses and qualitative systematic reviews can be used to aggregate the empirical evidence across studies. They are at the top of the **hierarchy of evidence**. For **practitioners** and **policy makers**, meta-analyses can be an authoritative source of evidence:

- The Cochrane Reviews (public health)
- The Campbell Collaboration (social policy, and criminal justice)
- Visible learning: A synthesis of over 800 meta-analyses relating to achievement (Hattie 2008)

For **researchers**, meta-analyses and systematic reviews may indicate areas where empirical evidence is inconclusive.

Meta-analyses are able to address common errors that cannot be eliminated in empirical studies (e.g., measurement error or publication bias).

Why literature reviews are exciting (IV)

Literature reviews can have a profound impact (e.g., Vial 2019 is cited 2,000 times per year)

Why literature reviews are exciting (V)

There are many open challenges, such as

- Considering differences and synergies between disciplines in the design of methods and tools,
- Design of LR software to manage data, AI, and collaboration,
- Coping with massive input and addressing urgent demands (e.g., [COVID reviews](#))

Learning objectives

Acquire a broad understanding of

- the **goals** and types of literature reviews
- the **steps** of the process
- the **qualities** of a good review paper
- the **tools** available

Outcome

- A **review protocol** applying this understanding and a short **presentation**
- [Criteria and resources](#) are available online
- Dates for submission and presentation: see [outline](#)

We work hard to improve the seminar for you

In line with our [values](#) and our [teaching concept](#), we

- Run evaluations at the end of each semester and make the results publicly available ([view results](#)).
- Document how we implement your feedback and continuously improve the course ([see ongoing updates](#)).
- Invite you to contribute directly to our teaching materials by submitting an issue  or suggesting edits .
- Actively actively contribute to the discourse on literature reviews and benefit from the feedback of peers:

Eckhardt, P., Ernst, K., Fleischmann, T., Geßler, A., Schnickmann, K., Thurner, L., and Wagner, G. “search-query: An Open-Source Python Library for Academic Search Queries”.
( student working paper)

Wagner, G., Prester, J., Mousavi, R., Lukyanenko, R., and Paré, G. “Generative Artificial Intelligence and the Future of Literature Reviews and Scientific Inquiry”. (working paper)

Wagner, G., Prester, J., Lukyanenko, R., and Paré, G. “Data Management in Literature Reviews: Foundations, Principles, and Recommendations”. (working paper)

We value feedback — please let us know what works and how we can improve 

Administration and Materials

Contact: gerit.wagner@uni-bamberg.de

Consultation hours: via [Calendly](#)

Materials are available [online](#):

Slides

- Presentation slides will be made available for download.
- You are expected to take complementary notes and read the recommended literature.

Literature

- Literature and complementary materials are listed at the end of each lecture.
- Reading of complementary materials depends on your interest and ambition.

Acknowledgement:

- Guy Paré: the materials are largely based on his literature review seminar.
